

AFTERLIFE

a reverb by FUZZROCIOUS PEDALS

WHAAAAAAAAAAAAAAAAAAAAAAAAAAT?

AFTERLIFE is a reverb pedal that does more and looks more fun than you're plain old reverb pedal. Sprung from a conversation with Young Widows, they sparked the idea for a reverb that is lush, controllable in repeats, AND offers a second output that sends a totally wet reverbed signal with zero dry signal.

You can send the second output to the second input of your amp or even your second amp for a bi-amp setup. When both outputs are utilized, a jangly, seasick, back and forth sound occurs. When the Repeats 1 knob is set to a longer repeats, you can get some insane oscillation!

...but wait! THERE'S MORE!!! When the pedal is on/active, you can use the 2nd footswitch to jump between "Repeats 1" and "Repeats 2" for two repeats settings (think short repeats/long oscillating repeats). When the pedal is off, if the "Repeats 2" knob is fully clockwise, the second momentary footswitch sends oscillation to the second output.

This is a Belton brick-based reverb based on the D Verb.

HARDWARE

bypass footswitch, momentary Repeats 1/Repeats 2 setting footswitch, mix knob, Repeats 1 pot, Repeats 2 pot, 2nd output volume pot, on/off LED eyes, and 1590BB enclosure.

POWER REQUIREMENTS

9V power (2.1 mm negative center pin adapter - like a One Spot or Boss adaptor)
