

# THE DEMON

an overdrive/distortion by FUZZROCIOUS PEDALS

## WHAT'S IN THE BOX? WHAAAAAT'S IIIIN THE BOOOOOOOX?!

The Demon is a low to medium-high gain dude with some nice tweaks here and there. This pedal just makes your instrument sound "right." Now available with a gate/boost mod via a second footswitch to hit hard and sputter out hard! The feedback mod allows semi-tunable feedback notes and the second drive setting mod allows the user to jump between two different drive settings (ex. - low to medium-high gain). The killswitch lets you kill or mute instrument's signal so you can make your own tremolo or stutter notes by foot (or finger...or ya know).

## HARDWARE

bypass footswitch, volume knob, tone knob, drive knob, on/off LED, and 1590BB enclosure.

## POWER REQUIREMENTS

9V power (2.1 mm negative center pin adaptor - like a One Spot or Boss adaptor)
