

FUZZROCIOUS PEDALS

DARK DRIVING

ABOUT

DARK DRIVING is a lower gain overdrive based on various low gain guitar and bass overdrives. There is no low end or mids loss with this pedal! Perfect for an “always on” OD! We have added a “dark/bright mod” via a 2nd footswitch to change the nature of the drive from a brighter tone to a muddier, darker one.

To further extend the usability/tweakability of the pedal, we have the diode modification allowing the user to switch between 9 different combinations of diodes to further shape his/her tone: LED/none/asymmetrical LED and 1n4001/none/asymmetrical 1n914 diodes.

CONTROLS

tone – fully counterclockwise is full bass. As you rotate clockwise, the tone moves towards treble.

VOLUME – makes the output of Output 2 louder or quieter.

GAIN – as you rotate clockwise, gain/drive increases.

NOTES

LEFT FOOTSWITCH – this latching footswitch switches between a brighter tone to a muddier, darker one.

POWER

Fuzzrocious Pedals' products do not support batteries due to risk of damage to the unit and for ecological concerns related to the use and disposal of batteries. It is the customer's responsibility to power the pedal with a 9V DC 2.1mm center negative tip adaptor that will not be provided by Fuzzrocious Pedals, LLC.

PAINT

All handpainted pedals, unless otherwise specified are painted with enamel or acrylic paint by Shannon Ratajski. Some pedals are painted by the Ratajski children. Powdercoating and screenprinting for pedals sold through dealers are done locally by Juxtaprints.
